CUSTOMER CARE AND SERVICE

Always use original spare parts.

When contacting our Authorised Service Centre, ensure that you have the following data available: Model, PNC, Serial Number.

The information can be found on the rating plate.

Warning / Caution-Safety information.

General information and tips.

Environmental information.

Subject to change without notice.

1. SAFETY INFORMATION

Note: You must read these warnings carefully before installing or using the refrigerator.

If you need assistance, contact your customer care centre. The manufacturer will not accept liability, should these instructions or any other safety instructions incorporated in this book be ignored.

WARNING

- It is essential the electric outlet is properly earthed to ground. Consult a qualified electrician if you are unsure.
- Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.
- Unplug the refrigerator before cleaning or moving it to avoid electric shock.
- Never unplug the refrigerator by pulling the electrical cord as this may damage it. Grip the plug firmly and pull straight out.
- If the power cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
- Don't use a steam cleaner. If live components come into contact with condensing steam, they may short-circuit or cause an electric shock.
- Do not store explosive substances such as aerosol cans with a flammable propellant this appliance. If pressurised aerosol containers bear the word 'flammable' and/or a small flame symbol, do not store them inside any refrigerator or freezer. If you do so you may cause an explosion.
- Do not damage the refrigerant circuit.
- This appliance contains insulation formed with flammable blowing gases. Avoid safety hazards by carefully disposing of this appliance.
- If you wish to discard this refrigerator, please contact your local authorities and ask for the correct method of disposal.
- When you dispose of your old refrigerators and freezers, remove any doors. Children can suffocate if they get trapped inside.

- When positioning the appliance, ensure the supply cord is not trapped or damaged.
- Do not locate multiple portable socket-outlets or portable power supplies at the rear of the appliance.

WARNING

R600a refrigerant warning

This appliance contains flammable R600a refrigerant. Avoid safety hazards by carefully installing, handling, servicing and disposing of this appliance.

- Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation.
- Leaking refrigerant may cause eye injuries or ignite.
- The room for installing appliance must be at least 1m³ per 8g of refrigerant. The amount of refrigerant in the appliance can be found on the rating plate inside the appliance.
- If you are unsure of the refrigerant check the rating plate inside the refrigerator compartment.
- It is hazardous for anyone other than an Authorised Service Person to service this appliance. In Queensland Australia the Authorisation Service Person MUST hold a Gas Work Authorisation for hydrocarbon refrigerants to carry out servicing or repairs which involve the removal of covers.
- Keep ventilation openings in the appliance enclosure or in the built-in structure, clear of obstruction.
- Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

3. INSTALLING YOUR NEW APPLIANCE

Unpacking

ENVIRONMENT

Most of the packing materials are recyclable. Please dispose of those materials through your local recycling depot or by placing them in appropriate collection containers.

Important – check for any damages or marks. If you find the refrigerator is damaged or marked, you must report it within 7 days should you wish to claim for damage/marks under the manufacturer's warranty. This does not affect your statutory rights.

Clean your refrigerator thoroughly following the instructions in the "Cleaning" section and wipe off any dust that has accumulated during shipping.

Locating the refrigerator

CAUTION

Automatic aerosol systems (such as insect control) should not be located adjacent to the product as the spray may cause long term damage to the external plastics of the appliance.

Do not put the refrigerator in a location that is too cold or is unprotected, for example in a garage or on a veranda. The ambient temperature should be above 10°C.

Put the refrigerator in a dry place avoiding areas of high moisture or humidity. Ensure the refrigerator is located on an even surface.

Adequate ventilation around your refrigerator

The diagram below shows the recommended airspace to allow for ventilation of your refrigerator.

When positioned in a corner area, spacing of right side at least 260 mm and left side at least 355 mm on the hinge side will allow the doors to open enough to enable the removal of bins and shelves.

Note: Doors are designed to sit proud of cabinetry (not flush). The clearances shown above are the recommended minimum clearances.

Installing your refrigerator

Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:

Note: If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

Door opening

Your refrigerator should be positioned to allow easy access to a counter when removing food. For best use of refrigerator drawers and freezer baskets, the refrigerator should be in a position where both can be fully opened.

CAUTION

LED lighting

Your appliance is fitted with long life LED lighting. In the unlikely event the LED lights should fail, then the LED lights should be serviced by the service agent, to avoid a safety hazard. Refer to the warranty page for contact details.

Cabinet Leveling & Refrigerator Door Alignment (if necessary)

- All four corners of the cabinet must rest firmly on the floor
- The front should be slightly elevated to
- ensure that doors close and seal properly.
- Doors should align with each other and be level.

Most of these conditions can be met by raising or lowering the adjustable front rollers.

To level the cabinet using the front rollers:

1. Lower anti-tip legs until they are both touching the floor. Use a pair of pliers to adjust

To raise: turn leg clockwise.
To lower: turn leg counterclockwise.

2. Ensure both doors are bind-free with their seals touching the cabinet on all four sides and that cabinet is stable.

To make final door height adjustments:

1. Insert Electrolux 10mm wrench into the shaft of the lower hinge.
2. To lower door: turn adjustment screw clockwise.
To raise door: turn adjustment screw counter clockwise.

Flipper Mullion

Adjust Flipper Mullion for proper connection with the mullion guide by ensuring the flipper mullion is folded and perpendicular to the fresh food door. If the mullion guide is not in the correct position, it could prevent the door from closing completely.

Bottom Doors Vertical Alignment

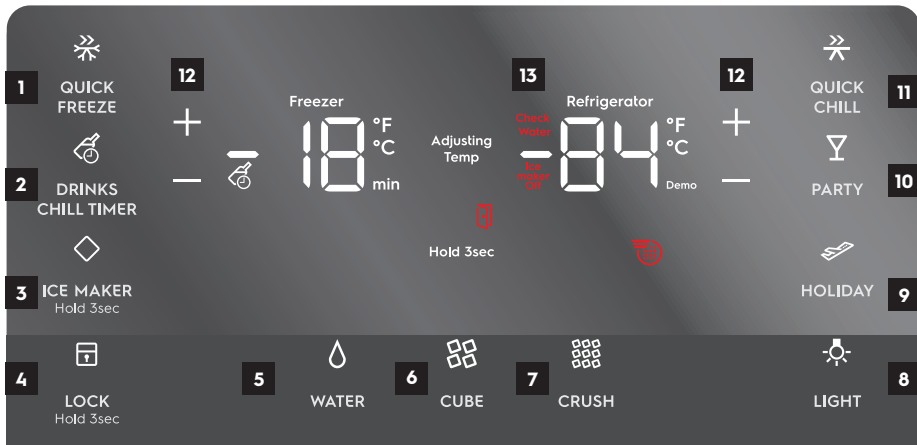

In some cases the bottom doors might be slightly vertically misaligned. To correct this difference it may be used the C-Shaped Shim supplied with the unit.

The shim must be installed on the bottom hinge of the lower door lifting it to get access of the pin where the shim must be attached, as follows on the images.

4. CONTROL

4.1 External User interface

BUTTON / ICON	DESCRIPTION	PRIMARY FUNCTION
1	QUICK FREEZE	Activates a faster rate for freezing food in the freezer. Deactivates after 12 hours.
2	DRINKS CHILL TIMER	Quickly chills a drink inside the freezer compartment. Touch the Drinks Chill Key, a time value will display on the freezer temp display (in minutes) and can be changed using the +/- buttons. A tone will sound when the time has been input. Range is from 20-45 minutes in 5 minute intervals.
3	ICE MAKER	When LED is lit, the ice maker is on. When ice maker is in OFF state, the indicator will blink when dispensing ice. Press and hold for 3 seconds to turn ice maker on/off.
4	LOCK	Press and hold for 3 seconds to enable/disable. While in the locked state, you will not be able to change any settings on the display nor dispense ice and water. The indicator will flash and an audible warning tone is played.
5	WATER	Press the "water" key to select water. An indicator light will be illuminated above the active feature.
6	CUBE	Press the "cube" key to select cubed ice. An indicator light will be illuminated above the active feature.
7	CRUSH	Press the "crush" key to select crushed ice. An indicator light will be illuminated above the active feature.
8	LIGHT	Toggles dispenser light On and Off.

BUTTON / ICON	DESCRIPTION	PRIMARY FUNCTION
9	HOLIDAY	<p>Maximum energy efficiency when the user is away from the appliance for an extend period. Conserves energy by increasing the time between automatic defrost. Manually turned on/off</p> <p>It also turns off automatically when the user opens one of those doors/drawers or press the lever (dispenser) after 30 minutes from the time it was turned on.</p> <p>After turns it off, the product will recover the internal temp to set temperatures and the "Ice Maker" function will also recover the previous status (On or OFF) automatically. BUT other function status won't be recover.</p>
10	PARTY	<p>This bottom should set up the freezer in -23°C and the fridge in 0°C during 6 hours. After that, the product should return to the previous settings.</p>
11	QUICK CHILL	<p>Quick chill is a faster rate for chilling food in the refrigerator compartment. Deactivates after 6 hours.</p>
12	ADJUSTING TEMP	<p>Press either the + or - to adjust to desired temperature setting.</p> <p>Freezer temp - Control temperatures range From -23°C to -15°C.</p> <p>Refrigerator temp - Control temperatures range From +1°C to +7°C.</p>
13	CHECK WATER	<p>When the panel show "check water", fill the internal tank up.</p>

4.2 TASTESEALFLEX control panel

BUTTON / ICON	DESCRIPTION	PRIMARY FUNCTION
1	Unlock	The interface will automatically lock after 3 seconds without any interaction. Press and hold 3 seconds to unlock the interface. A tone will sound to confirm your choice.
2	Wine & Champagne	Choosing Wine & Champagne will set TASTESEALFLEX temperature to 7°C. A tone will sound to confirm your choice.
3	Deli Snacks	Choosing Deli Snacks will set TASTESEALFLEX temperature to 3°C. A tone will sound to confirm your choice.
4	Cold Drinks	Choosing Cold Drinks will set TASTESEALFLEX temperature to 0°C. A tone will sound to confirm your choice.
5	Meat & Seafood	Choosing Meat & Seafood will set TASTESEALFLEX temperature to -2°C. A tone will sound to confirm your choice.
6	Freezer	Choosing Freezer will set TASTESEALFLEX temperature to the same temperature as the freezer compartment. A tone will sound to confirm your choice.

5. SETTING COOLING TEMPERATURES

Note: The recommended settings for a product installed in a kitchen is 3°C for the fresh food compartment and -18°C for the freezer.

IMPORTANT

If your product has food freezing in the fresh food compartment, increase the temperature setting 1 or 2 degrees Celsius.

If you place food within 3 cm in front of the air ports, there may be the chance of freezing food.

Note: Control features and alarms may vary by model.

Alerts and Alarms

Air Filter Installation

First operation the refrigerator need to installation the air filter which storage at crisper left side and follow installation method as below.
Carbon activated air filter

1. Remove plastic wrap.
2. Install filter according to your refrigerator's use&care guide.
3. Reset filter reminder light on your refrigerator.
4. Replace filter every 6 months.

When illuminated, air filter needs to be replaced. Change the air filter every 6 months. To reset, press and hold button for 3 seconds. Tone will sounds once it has been reset.

Door Open

If a door has been left open for 5 minutes or more, an alarm will sound and the door open indicator will illuminate on the display. The alarm can be turned off by closing the door or pressing any key. Control panel will return to normal operation after the door is closed.

Error Tone

An alarm will sound if the user tries to make a selection that is not available.

6. AUTOMATIC ICE & WATER DISPENSER

Using the ice maker after installation

Before making ice for the first time, be sure to prime the water supply system. Air in new plumbing lines can result in two or three empty ice maker cycles. Furthermore, if the system is not flushed, the first ice cubes may be discolored or have an odd flavor.

Refilling the water tank

- The water tank must be placed on the door.
- Pour potable water through the funnel at the lid of water tank.
- Ensure that ice maker and dispenser is switched on.

Priming the water supply system

1. Begin filling the system by pressing and holding a drinking glass against the dispenser.
2. Keep the glass in this position until water comes out of the dispenser. It may take about 1½ minutes.
3. Continue dispensing water for about four minutes to flush the system and plumbing connections of any impurities (stopping to empty the glass as necessary).

Dispenser

Note: The water dispenser has a built-in device that shuts off the water flow after three minutes of continuous use. To reset this shut-off device, simply release the dispenser paddle. Only the first 750 ml of dispensed water is chilled.

CAUTION

Do not fill the Water tank with anything other than clean water (Filtered or Mineral water). Soft drink, juice, tea or hot water etc, can damage your automatic icemaker. The Water tank can withstand a maximum water temperature of 60°C

Tip and Useful Information

Remove and clean ice bin and water tank once a month, discarding unused ice and water. This will ensure fresh ice and smooth operation of your icemaker. Make sure your refrigerator is level to avoid uneven ice cubes.

Ice maker operation & care

After the refrigerator is installed properly and has cooled for several hours, the ice maker can produce ice within 24 hours. The ice maker will fill the ice bin from the rear. You must dispense some ice to force the ice forward in the bin. This will allow the bin to fill completely.

Ice Maker and Storage Bin Capacity

This ice maker should produce 1 kg of ice per 24 hours. The ice bin will hold about 1.8 kg of ice.

Turning the ice maker on and off

IMPORTANT

Your ice maker is turned on at the factory so it can work as soon as you install your refrigerator. If you do not fill the water tank, set the ice maker's On/Off feature to Off; otherwise, the ice maker's fill valve may make a loud chattering noise when it attempts to operate without water.

Ice production is controlled by the ice maker's On/Off feature on the control panel. Pressing the On/Off feature turns the ice maker on & off.

Note: The ice maker also has a built-in plastic signal arm that automatically stops ice production when the ice bin is full. This signal arm should not be used to manually stop the ice maker.

IMPORTANT

Turning off the ice maker simply disables ice making. You will still be able to dispense existing ice, and you will still be able to dispense water.

Ice maker/dispenser tips

- If your refrigerator is not connected to a water supply or the water supply is turned off, turn off the ice maker as described in the previous section.
- The following sounds are normal when the ice maker is operating:
 - Motor running
 - Ice dropping into ice bin
 - Water valve opening or closing
 - Running water
- If you need a large quantity of ice at one time, it is best to get cubes directly from the ice bin.
- Ice cubes stored too long may develop an odd flavor. Empty the ice bin as explained below.
- When dispensing cubed ice, it is normal to have a small quantity of little pieces along with the whole cubes.
- To avoid splashing, dispense ice into your container before adding liquids.
- It is normal for ice to fill to the top of the ice bin.

CAUTION

If the water supply to your refrigerator is softened, be sure the softener is properly maintained. Chemicals from a water softener can damage the ice maker.

Cleaning the ice maker

Clean the ice maker and ice bin at regular intervals, especially prior to vacation or moving.

1. Turn off the icemaker.
2. Remove the ice bin by pulling straight out.
3. Empty and carefully clean the ice bin with mild detergent. Do not use harsh or abrasive cleaners. Do not place in dishwasher. Rinse with clear water.
4. Allow the ice bin to dry completely before placing it back into the freezer.
5. Place ice bin back into position. Turn the ice maker on.

Remove and empty the ice bin if:

- An extended power failure (one hour or longer) causes ice cubes in the ice bin to melt and refreeze together after power is restored, jamming the dispenser mechanism.
- You do not use the ice dispenser frequently. Ice cubes will freeze together in the bin, jamming the dispenser mechanism.

**Removing Ice Bin**

Remove the ice bin and shake to loosen the cubes or clean as explained above.

**CAUTION**

NEVER use an ice pick or similar sharp instrument to break up the ice. This could damage the ice bin and dispenser mechanism.

To loosen stuck ice, use warm water. Before replacing the ice bin, make sure it is completely dry.

**IMPORTANT**

When removing or replacing the ice bin, avoid rotating the auger in the ice bin. If the auger is accidentally rotated, you must realign the auger by turning it in 45 degree turns (see below) until the ice bin fits into place with the drive mechanism. If the auger is not properly aligned when replacing the ice bin, the refrigerator will not dispense ice. The fresh food door also may not close properly causing warm air to leak into the fresh food compartment.

**Adjusting the Ice Bin Auger**

7. STORAGE FEATURES

⚠ CAUTION

To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched or exposed to sudden temperature change. Allow the glass shelves to stabilize to room temperature before cleaning. Do not wash in dishwasher.

You can easily adjust shelf positions in the fresh food compartments to suit your needs. The shelves have mounting brackets that attach to slotted supports at the rear of each compartment.

To change a shelf position:

1. Remove all food from shelf.
2. Lift the front edge up and pull the shelf out.
3. Replace by inserting the mounting bracket hooks into the desired support slots.
4. Lower the shelf and lock into position.

To adjust the flip shelf:

1. Remove food from shelf.
2. Lift the right side edge of shelf upwards and push to the left towards ice maker

Flip Shelf

To adjust the slide-under/flip shelf:

1. Pull front half shelf forward until its back drops down, then gently push front half shelf back and under back half shelf.

Slide-Under/Flip Shelf

2. With front half fully below back half, lift front of shelf to flip it upwards toward the back of the cabinet

Slide-Under/Flip Shelf

Drawers

Your refrigerator includes a variety of storage drawers.

FreshSeal™ Crisper (with automatic humidity control)

Crisper drawers are designed for storing fruits, vegetables, and other fresh produce. Crispers have an auto humidity control (with replaceable membrane) on the side of each crisper under the humidity control cover.

To remove the auto humidity control membrane:

1. Reach to back of humidity control cover.
2. Pull up on cover.
3. Pull cover towards back of cabinet and remove.
4. Replace humidity membrane.
5. Replace cover by reversing the steps above. Repeat for both crispers.

Opening the Crisper Drawer

To remove the FreshSeal™ Crisper for cleaning:

1. Pull the drawer out until it stops.
2. Lift the front slightly and remove the drawer.

Removing the FreshSeal™ Crisper

Recessed SnackZone

This drawer is ideal for storage of deli meats and cheese.

Slide back the cover to allow access to the drawers.

Opening the SnackZone

Doors

Storage bins

The doors to your fresh food compartment use a system of modular storage bins. All of these bins are removable for easy cleaning. Bins can be adjusted to your needs.

Door bins are ideal for storing jars, bottles, cans, and large drink containers. They also enable quick selection of frequently used items.

Adjustable door bins

Some models have adjustable door bins that can be moved to suit individual needs.

To adjust the collapsible door bin:

1. Make sure bin is securely seated on rail in door.
2. Grab one side of bin and place other hand on adjustable side.
3. Pull on side of bin until the bin is adjusted to desired width.

Note: It can be difficult to pull out the collapsible bin. Some force may be required.

To move door bin along a rail:

1. Tilt bin up so the back of the bin is off the door but the hook is still engaged.
2. Slide bin along rail to desired position.
3. Lower bin back into place.

To move door bin from rail to rail:

1. Lift bin up disengaging the hook.
2. Move bin to desired rail location.
3. Push bin hook into rail engaging the hook.

Adjustable Door Bins

Freezer storage

To remove freezer and FlexSpace shelves and drawers:

All freezer and FlexSpace shelves and drawers are removable.

1. Open doors completely to gain access to shelves/drawers.
2. Pull the shelf/drawer to the stopper. Lift up and pull to remove it from the cabinet.
3. Reverse the steps to reinstall shelf/drawer.

The middle drawers in the FlexSpace™ and freezer can be mounted up to three height positions and can also invert 90 degrees allowing storage of bottles in the FlexSpace™.

Shelves in 3 Height Positions & Inverted

Possible Shelf Configuration Example

i IMPORTANT

There are wheels on the back of all shelves. Make sure all wheels are aligned on their respective tracks for proper function. If shelf is not aligned properly, it will cause problems with the door operation.

8. GENERAL INFORMATION

8.1 CLEANING YOUR REFRIGERATOR

WARNING

BEFORE CLEANING: Turn the refrigerator off at the power point and unplug the cord to prevent any chance of electrocuting yourself.

Doors and exterior (white and silver)

You should only clean the doors with lukewarm soapy water and a soft cloth.

Stainless Steel

Your stainless steel refrigerator is manufactured from mark-resistant stainless steel. This stainless steel has a special advanced protective coating that eases the removal of marks such as fingerprints and water spots. To keep its appearance, clean it regularly with lukewarm soapy water and a soft cloth.

CAUTION

Never use stainless steel cleaners, abrasive pads or other cleaners that will scratch the surface. Damage to the appliance after delivery is not covered by your warranty.

Water Tank

The tank has to be removed from the door only for cleaning purposes, to fill the portable water only, the tank must be placed on the door and the funnel on the lid has to be used

Interior

Clean the inside of your refrigerator regularly with a soft cloth, unscented mild soap and lukewarm water. Thoroughly dry all surfaces and removable parts and avoid getting water on the controls. Replace removable parts, plug power cord in and switch the power on before returning the food.

Ice and water

Clean the components of the ice maker/water dispenser regularly with a soft cloth, unscented mild soap and rinsing thoroughly with lukewarm water. For further information on the care and cleaning of your ice maker, ice dispenser or water dispenser refer to the section "Ice and Water Models"

Water Tank Assembly

Clean the inside of the water tank regularly with a soft cloth, unscented mild soap and rinse thoroughly with lukewarm water to completely remove any soap residue.

Water tank cleaning:

The tank has to be removed from the door and lift the lid off water tank.

NOTE: When customer assembled tank to door To avoid water leaks ensure that tank nozzle fully engaged with housing socket.

Door seals

Always keep door seals clean by washing them with a mild detergent and warm water, followed by a thorough drying. Sticky food and drink can cause seals to stick to the cabinet and tear when you open the door.

Never use hot water, solvents, commercial kitchen cleaners, aerosol cleaners, metal polishes, caustic or abrasive cleaners, or scourers to clean your refrigerator. Many commercially available cleaning products and detergents contain solvents that will damage your refrigerator. Use only a soft cloth with an unscented mild soap and lukewarm water.

**CAUTION**

To clean a crisper or freezer bin with telescopic extension slides, simply wipe with a damp cloth and warm soapy water. Never immerse the cover in water, as this could affect the operation of the slide.

Switching off your refrigerator

If you switch off your refrigerator for an extended period, follow these steps to reduce the chances of mould.

1. Remove all food.
2. Remove the power plug from the power point
3. Thoroughly clean and dry the Interior.
4. Ensure that all the doors are wedged open slightly for air circulation.

8.2 CHANGING THE FILTER**Air Filter (select models)**

The air filter is located in the top center of the fresh food compartment.

Replacing your Air Filter

To ensure optimal filtering of refrigerator odors, you should change the air filter six months (The filter status light on the Touch Panel prompts you to replace the filter after six months)

1. Remove the air filter cover by squeezing the sides of the cover together and removing from liner
2. Remove the old filter and discard it
3. Unpack the new filter and slide it into the housing. The open face must (carbon media) of the filter should be installed facing the air port (hole) in the multiflow.
4. Replace the air filter cover by squeezing the sides and snapping it back into place.
5. Press and hold the "Reset Air Filter" button on the control panel for three seconds. When the LED turns off, the status has been reset.

9. FOOD STORAGE GUIDE

CATEGORY	PRODUCT	RECOMMENDED STORAGE TIMES FOR FRESH FOODS *			STORAGE TIPS
		REFRIGERATOR	ULTRA CHILL	FREEZER	
MEAT	Sausages and Mince	1-2 Days	3-5 Days	2-3 Months	Keep cold meat at the back of the refrigerator where it is coldest. Plastic can cause meat to sweat if stored in refrigerator for more than a day.
	Chops and Steak	3-4 Days	5-7 Days	4-6 Months	
	Cold Meats	3-5 Days	5-7 Days	4-6 Months	Roast can take up to 48 hours to defrost properly, transfer frozen roast to the refrigerator 2 days before use.
	Roasts	3-5 Days	1 week	12 Months	
POULTRY	Chicken	1-2 Days	5-7 Days	2 Months	If poultry takes on a smell or colour you are unsure about it is best to throw it out. Whole eggs are not suitable for freezing, slightly beaten eggs may be frozen for four months.
	Roast Chicken	3-5 Days	1 week	12 Months	
	Eggs	6 Weeks	Not Suitable	Not Suitable	
SEAFOOD	Whole fish and fillets	2-3 Days	5-7 Days	2 Months	Store in an airtight container or foil. Never freeze prawns in salty water as this will dehydrate the flesh.
	Lobster and Crab	1-2 Days	3-5 Days	2 Months	
	Prawns	1-2 Days	3-5 Days	2 Months	
DAIRY	Milk	Until Expiry Date	Not Suitable	Not Suitable	If dairy takes on a smell or colour and you are unsure about it, it is best to throw it out.
	Yoghurt	7- 10 Days	Not Suitable	Not Suitable	
	Hard Cheeses	2 Weeks – 2 Months	1-2 Months	2 Months (Grated)	Depending on the variety hard cheese can last from 2 weeks to 2 months.
	Soft Cheeses	1-2 Weeks	2-4 Weeks *	Not Suitable	* Texture may change depending of the type of soft cheese
	Butter	8 Weeks	3-4 Months	12 Months	
FRUIT & VEGETABLES	Every fruit and vegetable has a different shelf life. Some stay fresh for a couple of days e.g. beans, others can last for a couple of months e.g. onions.		Not Suitable	8-12 Months When freezing chop and blanch in small portions.	Keep vegetables in the crisper and away from the air vents to avoid freezing. If you wash fruit and vegetables before storing them make sure they are dry or wrap in absorbent paper before storing in the refrigerator as this can make them susceptible to rotting. Try to keep fruit and vegetables separated as fruits that give off high levels of ethylene (the ripening agent) can prematurely ripen and spoil surrounding vegetables

IMPORTANT

* Please note, use this information as a guide only, actual storage times will vary depending on how you use your refrigerator.

10. TROUBLESHOOTING

Concern	Potential Cause	Common Solution
Automatic Ice Maker		
Ice maker is not making any ice.	<ul style="list-style-type: none"> • Ice maker is turned off. • Refrigerator is not connected to water line or water valve is not open. • The water supply line is kinked. • The water filter is not seated properly. • The water filter may be clogged with foreign material. 	<ul style="list-style-type: none"> • Turn on ice maker. For the fresh food ice maker, press ice maker on-off button once. • Connect the unit to the household water supply and ensure the water valve is open. • Ensure that the supply line does not kink when the refrigerator is pushed into place against the wall. • Remove and re-install the water filter. Be sure to seat it fully into the locked position. • If water dispenses slowly or not at all, or if the filter is six months old or older, it should be replaced.
Ice maker is not making enough ice.	<ul style="list-style-type: none"> • Ice maker is producing less ice than you expect. • The water filter may be clogged with foreign material. • The water supply line is kinked. • Water pressure is extremely low. Cut-off and cut-on pressures are too low (well systems only). • Reverse osmosis system is in regenerative phase. 	<ul style="list-style-type: none"> • The ice maker will produce approximately 1 kg of ice every 24 hours depending on usage conditions. • If water dispenses slower than normal, or if the filter is six months old or older, it should be replaced. • Ensure that the supply line does not kink when the refrigerator is pushed into place against the wall. • Have someone turn up the cut-off and cut-on pressure on the water pump system (well systems only). • It is normal for a reverse osmosis system to be below 137 kPa (20 psi) during the regenerative phase.
Ice cubes are freezing together.	<ul style="list-style-type: none"> • Ice cubes are not being used frequently enough or interruption of power for prolonged time. • Ice cubes are hollow (shells of ice with water inside). The hollow cubes break open in the bin and leak their water onto existing ice, which causes it to freeze together. 	<ul style="list-style-type: none"> • Remove ice container and discard ice. The ice maker will produce fresh supply. Ice should be used at least twice weekly to keep the cubes separated. • This generally occurs when the ice maker does not get enough water. This is usually the result of a clogged water filter or restricted water supply. Replace the water filter and if the condition still occurs, check to see if the water valve is not turned on all the way or if there is a kinked water supply line.
Dispenser (Ice & Water)		
Dispenser (Ice & water) not dispensing ice.	<ul style="list-style-type: none"> • There is no ice in the bin to be dispensed. • The refrigerator doors are not completely closed. • Dispenser paddle has been pressed too long and the dispenser motor has overheated. 	<ul style="list-style-type: none"> • See the "Ice maker is not making any ice" section. • Be sure the refrigerator doors are completely closed. • The motor overload protector will reset in about three minutes and then ice can be dispensed.

Concern	Potential Cause	Common Solution
Dispenser (Ice & Water)		
Ice dispenser is jammed.	<ul style="list-style-type: none"> • Ice has melted and frozen around auger due to infrequent use, temperature fluctuations, and/or power outages. • Ice cubes are jammed between ice maker and back of ice container. 	<ul style="list-style-type: none"> • Remove ice container, thaw, and empty the contents. Clean container, wipe dry, and replace in proper position. When new ice is made, dispenser should operate. • Remove ice cubes that are jamming the dispenser.
Dispenser (Ice & water) not dispensing water.	<ul style="list-style-type: none"> • Dispenser (Ice & water) not dispensing water. 	<ul style="list-style-type: none"> • Remove and reinstall the water filter. Be sure to rotate it to the right until it stops and the grip end is vertical. • Replace filter cartridge. Be sure to rotate it to the right until it stops and the grip end is vertical. • Open household water line valve. See CONCERN column AUTOMATIC ICE MAKER.
Water not cold enough.	<ul style="list-style-type: none"> • As warmer tap water goes through the filter and enters the water supply system, the chilled water is pushed through to the dispenser. Once the chilled water is used up, it will take several hours to bring the freshly replaced water to a cooler temperature. 	<ul style="list-style-type: none"> • Add ice to cup or container before dispensing water.
Water has an odd taste and/or odor.	<ul style="list-style-type: none"> • Water has not been dispensed for an extended period of time. • Unit not properly connected to cold water line. 	<ul style="list-style-type: none"> • Draw and discard 10-12 glasses of water to freshen the supply. • Connect unit to cold water line that supplies water to the kitchen faucet.
Opening/Closing Of Doors/Drawer		
Door(s) will not close.	<ul style="list-style-type: none"> • Door was closed too hard, causing other door to open slightly. • Refrigerator is not level. It rocks on the floor when moved slightly. • Refrigerator is touching a wall or cabinet. • Check gasket and cabinet interface for any obstructions. 	<ul style="list-style-type: none"> • Close both doors gently. • Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor. • Ensure floor is level and solid, and can adequately support the refrigerator. Contact a carpenter to correct a sagging or sloping floor. • Clean the refrigerator door gaskets and interface with warm, soapy water to remove any grease, dirt and grime from the surface. Wipe clean with a dry cloth. Inspect the gasket to make sure it is thoroughly clean.
Drawers are difficult to move.	<ul style="list-style-type: none"> • Food is touching shelf on top of drawer. • Track that drawers slide on is dirty. 	<ul style="list-style-type: none"> • Remove top layer of items in drawer. • Ensure drawer is properly installed on track. • Clean drawer, rollers, and track. • See Care & Cleaning.

Concern	Potential Cause	Common Solution
Running of Refrigerator		
Compressor does not run.	<ul style="list-style-type: none"> Refrigerator is in defrost cycle. Plug at electrical outlet is disconnected. House fuse blown or tripped circuit breaker. Power outage. 	<ul style="list-style-type: none"> This is normal for a fully automatic defrost refrigerator. The defrost cycle occurs periodically, lasting about 30 minutes. Ensure plug is tightly pushed into outlet. Check/replace fuse with a 15 amp time-delay fuse. Reset circuit breaker. Check house lights. Call local electric company.
Refrigerator seems to run too much or too long.	<ul style="list-style-type: none"> Your variable speed compressor is designed to run 100% of the time except during the defrost cycle. At times it will run faster, such as after a defrost cycle. 	<ul style="list-style-type: none"> It is normal for the compressor to run continuously except during defrost mode.
Digital Temperature Setting Display		
Digital temperature displays an error.	<ul style="list-style-type: none"> Electronic control system has detected a performance problem. 	<ul style="list-style-type: none"> Call your Electrolux service representative, who can interpret any messages or number codes flashing on the digital displays.
Water/Moisture/Frost Inside Refrigerator		
Moisture collects on inside of refrigerator walls.	<ul style="list-style-type: none"> Weather is hot and humid. Flipper mullion 	<ul style="list-style-type: none"> The rate of frost buildup and internal sweating increases. Adjust flipper mullion. (See "To adjust the flipper mullion" in the Installation section.)
Water collects on bottom side of drawer cover.	<ul style="list-style-type: none"> Vegetables contain and give off moisture. 	<ul style="list-style-type: none"> It is not unusual to have moisture on the bottom side of the cover.
Water collects in bottom of drawer.	<ul style="list-style-type: none"> Washed vegetables and fruit drain while in the drawer 	<ul style="list-style-type: none"> Dry items before putting them in the drawer. Water collecting in bottom of drawer is normal
Water/Moisture/Frost Outside Refrigerator		
Moisture collects on outside of refrigerator or between doors.	<ul style="list-style-type: none"> Weather is humid. 	<ul style="list-style-type: none"> This is normal in humid weather. When humidity is lower, the moisture should disappear.
Food in Fresh Food Compartment		
Food is freezing.	<ul style="list-style-type: none"> Temperature setting is too low. Temperature sensor is covered by food (right side of fresh food area). Food is covering the air ports. 	<ul style="list-style-type: none"> Move the setting to a higher degree. Allow space for air flow to the sensor. Allow space between the air ports and the food.
